ITS2105 : Programming I

This course builds on the foundation developed in ITS2104 Programming Logic. Students are introduced to the elements of structured programming-related components, such as overall program design, data types, variables, arrays, operators, control statements, classes, objects, methods, and inheritance. The course also introduces the concepts of packages and interfaces, as well as exception handling.

Credits 4.0

Prerequisites

ITS2104: Programming Logic

Corequisites

None
