

PHA4280 : Community Professional Practice Experience

The introductory community pharmacy practice rotation is designed to expose the student to a variety of patient care services in the community pharmacy practice site. The goal of the rotation is to teach the student to integrate basic pharmacy related concepts to patient care as an independent practitioner in an outpatient pharmacy setting. The primary focus should be on distributive functions but should include at an introductory level direct patient care (e.g., administration of immunizations, health-related screenings, self-care, medication therapy management services, and collaborative practice), pharmacy operations management, and personnel management.
