

PAS5180 : Clinical Medicine and Pharmacotherapeutics I

Clinical medicine is the core foundation of managing acute, chronic, and emergent medical disease progression across the life span. Through lectures and clinical scenarios, students explore the system-based epidemiology, etiology, clinical manifestations, diagnostic approach, and therapeutic management of diseases common to primary care practice. Preventative medical care with a focus on patient education is examined.

Credits 8.0

Prerequisites

Successful completion of coursework in preceding academic quarter

Corequisites

None
