

PAS5181 : Clinical Medicine and Pharmacotherapeutics II

Clinical medicine is the core foundation of managing acute, chronic, and emergent medical disease progression across the life span. Through lectures and clinical scenarios, students continue to explore the system-based epidemiology, etiology, clinical manifestations, diagnostic approach, and therapeutic management of diseases common to primary care practice. Preventative medical care with a focus on patient education is examined.

Credits 8.0

Prerequisites

Successful completion of coursework in preceding academic quarter

Corequisites

None
