

PSY4620 : Learning and Memory

To provide a comprehensive introduction to the theories and basic processes relevant to learning and behavior, with an emphasis on associative learning (classical and instrumental conditioning). We will discuss how these theories contain applicability to real world phenomena, such as training our pets, raising our children, treating mental illness, and treating drug addiction. In addition, you will gain exposure to the scientific method as well as improve your critical thinking skills through reading and critiquing scholarly work.

Credits 4.0

Prerequisites

[PSY3001](#) and [PSY3200](#) with grades of "C" or better

Corequisites

None
