

# PHE4015 : Introduction to Global Health

This course introduces the student to theory and practice in the field of global health dealing with not only the health issues of developing countries but the threats to health extending beyond borders and affecting the global population. Students will explore the determinants and disparities of health at the global level including poverty and health beliefs and behaviors; surveillance and intervention measures; global health policies; and the governmental and nongovernmental agencies and collaborative efforts and obstacles in play to resolve global health issues. Case studies and examples of current global health challenges and outcomes will be discussed with a focus on factors contributing to the issues and collaborative approaches to delivering solutions.
