

CNS6532 : Research and Evaluation Seminar

Studies that provide a basic understanding of types of research are presented: basic statistics; research report development; and research implementation. The research includes studies that provide a broad understanding of the importance of research in advancing the counseling profession. Other areas studied include program evaluation; needs assessment; publication of research information; parametric and non-parametric statistics; quantitative and qualitative research designs; the use of computers for data management and analysis; including ethical and legal considerations pertinent to the professional counselor including culturally relevant strategies for interpreting and reporting the results of research and program evaluation studies. This course is designed for students pursuing North Carolina Licensure requirements of this core course.
